SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: DAVID G. GRIFFIN Examiner #: 16101 Date: 11/29/2006
Art Unit: 1714 Phone Number 301-552 Serial Number: 151/552, 199
Mail Box and Bldg/Room Location: Room 10079 Results Format Preferred (circle) PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Material for organic electroluminescent deviceInventors (please provide full names): see attached Bldg sheetEarliest Priority Filing Date: 11/12/2002 - IP 2002-327956 (only limit date to as early as possible)

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

10/20/05

Please search for claims (1) and (11)
as set forth in claims I attached.

Do not limit search for compounds or
activity forms.

Thank you

present application

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB The invention refers to a material for organic electroluminescent devices composed of an aromatic amine derivative I, II, III and IV [A1-9 = H, (un)substituted C1-50 alkyl, C5-50 aryl, C3-50 cycloalkyl, C1-50 alkoxy, C5-50 aryloxy, C5-50 arylamino, C1-20 alkylamino, or halo; m = 0 -5; A1-12 may join together to form rings when m ≥ 2, however A1-4 may not all be H in I, A5-8 may not all be H in II, A9,10 may not both be H in

III, and A11,12 may not both be H in IV; R1-43 = H (un)substituted C1-20 alkyl, C6-20 aryl or cyano; X1-3 = (un)substituted C6-20 arylene], and an organic electroluminescent device comprising the above compound independently or as a component of a mixture for long life, high luminescent efficiency and blue emission with high color purity.

AB An organic electroluminescent device comprises a pair of electrodes and an organic luminescent medium layer which is placed between the electrodes and contains (A) a specific arylamine and (B) at least one compound selected from among specific anthracene derivs., spiro fluorene derivs., fused-ring compds., and metal complexes; and an organic luminescent medium containing the components (A) and (B). The organic electroluminescent device exhibits high color purity, excellent heat resistance and a long lifetime and emits blue to yellow light at high efficiency, and the organic luminescent medium is suitable for use in such devices.

AB Materials for organic electroluminescence devices are represented by
following general formula [1]: ##STR1##

wherein A represents a chrysene group, X^{sup.1} to X^{sup.4} each independently
represent a substituted or unsubstituted arylene group having 6 to 30
carbon atoms, X^{sup.1} and X^{sup.2} may be bonded to each other, X^{sup.3}

and X.⁴ may be bonded to each other, Y.¹ to Y.⁴ each independently represent an organic group represented by general formula [2], a to d each represent an integer of 0 to 2 and, a+b+c+d≥0; general formula [2] being: ##STR2##

wherein R.¹ to R.⁴ each independently represent hydrogen atom, a substituted or unsubstituted alkyl group having 1 to 20 carbon atoms, a substituted or unsubstituted aryl group having 6 to 20 carbon atoms, cyano group or form a triple bond by a linkage of R.¹ and R.² or R.³ and R.⁴, Z represents a substituted or unsubstituted aryl group having 6 to 20 carbon atoms and n represents 0 or 1.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention provides an organic electroluminescent device material composed of an aromatic amine derivative having a specific structure in which amine moieties are linked to a chrysene moiety; and an organic electroluminescent device having a cathode, an anode, and one or more organic thin-film layers interposed between the cathode and the anode, the organic thin-film layers including at least a light-emitting layer, wherein at least one of the organic thin-film layers contains the organic electroluminescent device material in the form of single component material or a mixture of a plurality of components. The organic electroluminescent device material and the organic electroluminescent device containing the material attains a long service life and can emit blue light of high color purity at high emission efficiency.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB An organic electroluminescence device having a layer of an organic light emitting medium which comprises (A) a specific arylamine compound and (B) at least one compound selected from specific anthracene derivatives, spirofluorene derivatives, compounds having condensed rings and metal complex compounds and is disposed between a pair of electrodes and an organic light emitting medium comprising the above components (A) and (B) are provided. The organic electroluminescence device exhibits a high purity of color, has excellent heat resistance and a long life and efficiently emits bluish to yellowish light. The organic light emitting medium can be advantageously used for the organic electroluminescence device.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Materials for organic electroluminescence devices and organic
electroluminescence devices which exhibit high efficiency of light
emission and have a long life and excellent heat resistance, novel
compounds and processes for producing the materials for organic
electroluminescence devices are provided.

The material for organic electroluminescence devices is represented by
following general formula [1]:

general formula [1] ##STR1##

wherein A represents a substituted or unsubstituted arylene group having
22 to 60 carbon atoms, X^{sup.1} to X^{sup.4} each independently represent a
substituted or unsubstituted arylene group having 6 to 30 carbon atoms,
X^{sup.1} and X^{sup.2} may be bonded to each other, X^{sup.3} and X^{sup.4} may
be bonded to each other, Y^{sup.1} to Y^{sup.4} each independently represent
an organic group represented by general formula [2], a to d each
represent an integer of 0 to 2 and, when the arylene group represented
by A has 26 or less carbon atoms, a+b+c+d>0 and the arylene group does
not contain two or more anthracene nucleus; general formula [2] being:

general formula [2] ##STR2##

wherein R^{sup.1} to R^{sup.4} each independently represent hydrogen atom, a
substituted or unsubstituted alkyl group having 1 to 20 carbon atoms, a
substituted or unsubstituted aryl group having 6 to 20 carbon atoms,
cyano group or form a triple bond by a linkage of R^{sup.1} and R^{sup.2} or
R^{sup.3} and R^{sup.4}, Z represents a substituted or unsubstituted aryl
group having 6 to 20 carbon atoms and n represents 0 or 1.
